

> PROBLEM STATEMENT BOOK

OMNIKON

National Hackathon — Problem Statement Book

Edition 2026 • 200 Problem Statements • 10 Domains • All Software

A curated set of open-ended, real-world challenges for teams to solve by building a software product — an app or a website. Each problem statement is deliberately framed to admit multiple valid solution approaches — there is no single 'correct' build.

BioTech

AgriTech

FinTech

EdTech

SmartCity

CleanTech

Transport

CyberTech

DisasterMgmt

Tourism

ID FORMAT: `Omni_<Domain>_<Number>` e.g. `Omni_BioTech_1`

Contents

200 problem statements across 10 domains, all buildable as an app or website. Each carries a unique ID in the format Omni_<Domain>_<Number>.

01	BioTech & HealthTech	20
	Challenges at the intersection of biology, medicine, and technology — spanning diagnostics, patient care, and public health delivery in resource-constrained settings.	statements
02	AgriTech & FoodTech	20
	Problems facing farmers, food producers, and supply chains — from soil health and crop protection to reducing waste and connecting rural producers with markets.	statements
03	FinTech & Financial Inclusion	20
	Challenges around expanding access to fair, secure financial services — for individuals, gig workers, small businesses, and underserved communities.	statements
04	EdTech & Skill Development	20
	Problems around access, quality, and personalization of education and skilling — for students, teachers, and lifelong learners across different resource settings.	statements
05	Smart Cities & Governance	20
	Challenges in making urban infrastructure, civic services, and local governance more efficient, transparent, and responsive to citizens.	statements
06	CleanTech & Environment	20
	Challenges in sustainability, pollution control, resource conservation, and environmental monitoring — for households, communities, and small industries.	statements
07	Transportation & Logistics	20
	Problems in moving people and goods more safely, efficiently, and sustainably — covering urban mobility, freight, and last-mile delivery.	statements
08	Cybersecurity, Blockchain & Digital Trust	20
	Challenges in protecting people, businesses, and institutions online — from fraud and phishing to verifiable identity, records, and trustworthy digital systems.	statements
09	Disaster Management & Public Safety	20
	Challenges in preparing for, responding to, and recovering from natural and man-made disasters — with a focus on early warning, coordination, and vulnerable populations.	statements
10	Tourism, Heritage & Emerging Tech	20
	Problems in making travel and cultural experiences safer, more sustainable, and more enriching — alongside open-ended challenges in emerging technology areas.	statements

BioTech & HealthTech

Problem Statements 1–20 (IDs Omni_BioTech_1 – Omni_BioTech_20)

Challenges at the intersection of biology, medicine, and technology — spanning diagnostics, patient care, and public health delivery in resource-constrained settings.

Omni_BioTech_1

SOFTWARE

Early Detection of Diabetic Retinopathy

Diabetic retinopathy often goes undiagnosed in rural areas due to lack of ophthalmologists and expensive imaging equipment. Build an app that enables early, low-cost screening and referral for at-risk patients using smartphone-based retinal image analysis.

Omni_BioTech_2

SOFTWARE

Non-Invasive Anemia Screening

Anemia is widespread but current diagnosis relies on invasive blood tests that are inconvenient for mass screening, especially among children and pregnant women. Develop an app that screens for anemia non-invasively using smartphone camera analysis of the eyes, nails, or skin.

Omni_BioTech_3

SOFTWARE

AI-Assisted Triage for Primary Health Centres

Rural primary health centres often have one doctor serving thousands of patients, leading to delayed identification of serious cases. Create a triage support app that helps health workers prioritize patients based on symptom severity.

Omni_BioTech_4

SOFTWARE

Continuous Monitoring for High-Risk Pregnancies

High-risk pregnancies need frequent monitoring that is often inaccessible to women in remote areas. Design an app that lets expectant mothers log and track vital maternal health parameters remotely and alerts caregivers to danger signs in time.

Omni_BioTech_5

SOFTWARE

Affordable Adaptive Prosthetic Limbs

Conventional prosthetics are costly and often lack adaptive grip control, limiting daily functionality for underprivileged amputees. Build a platform that connects underprivileged amputees with affordable, adaptive prosthetic designs, open-source builders, and fitting guidance.

Omni_BioTech_6

SOFTWARE

Tracking Antimicrobial Resistance Locally

Antimicrobial resistance is rising, but local pharmacies and clinics rarely share prescription and outcome data to spot emerging resistance patterns. Create a platform that aggregates this data to give early warnings to health authorities.

Omni_BioTech_7

SOFTWARE

Improving Medicine Adherence in Chronic Care

Elderly and chronic-disease patients frequently skip or mistime medication, worsening outcomes. Develop an app that improves medication adherence without being intrusive or dependent on high digital literacy.

Omni_BioTech_8

SOFTWARE

Portable Newborn Jaundice Screening

Newborn jaundice can cause serious complications if undetected, but screening tools are often unavailable in low-resource birthing centres. Build an app that uses smartphone camera-based image analysis to screen newborns for jaundice risk.

Omni_BioTech_9

SOFTWARE

Predicting Hospital-Acquired Infections

ICUs face significant risk from hospital-acquired infections that are often detected too late. Create a system that uses available clinical data to flag rising infection risk before it becomes critical.

Omni_BioTech_10

SOFTWARE

Bridging Rural Patients with Specialists

Patients with chronic conditions in remote areas struggle to get consistent specialist follow-up. Design a solution that enables reliable, structured remote consultation and continuity of care.

Omni_BioTech_11

SOFTWARE

Household-Level Water Contamination Detection

Contaminated drinking water is a major health hazard, but testing is usually centralized and slow. Build an app that lets households check water safety quickly using photo-based analysis of simple, low-cost test strips.

Omni_BioTech_12

SOFTWARE

Smartphone-Based Skin Cancer Screening

Dermatologists are scarce relative to population, delaying detection of skin conditions including cancers. Create an AI-assisted tool that helps flag suspicious skin lesions from smartphone images for further evaluation.

Omni_BioTech_13

SOFTWARE

Home Rehabilitation Tracking for Stroke Patients

Stroke patients need consistent physiotherapy, but many cannot access regular in-clinic sessions. Develop an app that uses the phone's camera to guide and track rehabilitation exercises safely at home.

Omni_BioTech_14

SOFTWARE

Early Malnutrition Identification in Children

Malnutrition in children under five often goes unnoticed until severe in remote communities. Build an app that gives community health workers a simple, scalable way to identify at-risk children early.

Omni_BioTech_15

SOFTWARE

Real-Time Blood Bank Demand Matching

Blood banks frequently face both shortages and wastage due to poor coordination between donors, hospitals, and demand. Create a platform that matches supply and demand in real time.

Omni_BioTech_16

SOFTWARE

Affordable Newborn Hearing Screening

Hearing loss in newborns often goes undetected due to limited access to audiologists, delaying critical early intervention. Design an app-based hearing screening tool, using guided smartphone audio testing, suitable for use by non-specialist staff.

Omni_BioTech_17

SOFTWARE

Early Signals for Mental Health Decline

Mental health decline among students and working professionals often goes unnoticed until crisis point. Build a respectful, privacy-conscious app that identifies early behavioural signals and connects people to support.

Omni_BioTech_18

SOFTWARE

Community-Level Tuberculosis Symptom Screening

TB often spreads further because symptoms are missed during routine community health visits. Create a companion app for community health workers to systematically screen for TB symptoms and follow up on suspected cases.

Omni_BioTech_19

SOFTWARE

Connecting Rare Disease Patients to Care

Patients with rare or genetic diseases often struggle to find relevant specialists, support groups, or ongoing clinical trials. Build a platform that connects them to the right resources.

Omni_BioTech_20

SOFTWARE

Cold-Chain Integrity for Vaccine Delivery

Vaccines lose efficacy when cold-chain is broken during last-mile delivery, especially in remote regions. Develop an app/platform that integrates with existing temperature loggers to monitor and flag cold-chain breaks through the delivery journey.

AgriTech & FoodTech

Problem Statements 21–40 (IDs Omni_AgriTech_1 – Omni_AgriTech_20)

Problems facing farmers, food producers, and supply chains — from soil health and crop protection to reducing waste and connecting rural producers with markets.

Omni_AgriTech_1

SOFTWARE

Low-Cost Soil Health Monitoring

Smallholder farmers rarely have access to affordable, frequent soil health testing, leading to inefficient fertilizer use. Build an app that helps farmers estimate and monitor key soil health parameters regularly using accessible test kits and guided data entry.

Omni_AgriTech_2

SOFTWARE

Offline-Capable Crop Disease Detection

Crop diseases and pests can devastate yields if not identified early, but farmers in low-connectivity areas lack timely diagnostic support. Create a tool that identifies common diseases and pests from images, working reliably offline.

Omni_AgriTech_3

SOFTWARE

Reducing Post-Harvest Losses in Perishables

A significant share of perishable produce is lost between harvest and market due to poor handling and storage decisions. Design an app that helps reduce these losses across the supply chain.

Omni_AgriTech_4

SOFTWARE

Smart Irrigation for Water-Scarce Regions

Over- and under-irrigation both hurt yields and waste scarce water resources. Build an app that helps farmers schedule irrigation more precisely using weather and soil data.

Omni_AgriTech_5

SOFTWARE

Direct Farmer-to-Buyer Marketplace

Farmers often receive a small share of the final price due to multiple middlemen in the supply chain. Create a platform that connects farmers more directly with buyers.

Omni_AgriTech_6

SOFTWARE

Mitigating Crop Damage from Weather Shocks

Unseasonal rain, hail, or heatwaves can destroy crops with little warning for farmers. Develop a solution that helps farmers anticipate and respond to weather-related crop risks.

Omni_AgriTech_7

SOFTWARE

Detecting Counterfeit Agricultural Inputs

Farmers sometimes unknowingly purchase counterfeit or substandard seeds and fertilizers, damaging yields and trust. Build an app that lets farmers verify the authenticity and quality of agricultural inputs.

Omni_AgriTech_8

SOFTWARE

Reducing Grain Spoilage in Rural Storage

Poor storage conditions in rural warehouses lead to significant grain spoilage every year. Create an app that helps monitor and optimize storage conditions to minimize losses.

Omni_AgriTech_9

SOFTWARE

Farm-to-Consumer Organic Produce Traceability

Consumers increasingly want to verify that organic produce is genuinely organic, but current traceability is weak. Design a transparent system that tracks organic produce from farm to consumer.

Omni_AgriTech_10

SOFTWARE

Early Disease Detection in Dairy Livestock

Undetected livestock disease can spread quickly and hurt small dairy farmers' livelihoods. Build an app that helps identify early signs of common livestock illness.

Omni_AgriTech_11

SOFTWARE

Data-Driven Micro-Credit for Farmers

Farmers often lack formal credit history, making it hard to access fair loans or insurance despite having productive farms. Create a solution that uses real farm data to support fairer credit and insurance decisions.

Omni_AgriTech_12

SOFTWARE

Optimal Crop Selection and Rotation Planning

Farmers often choose crops based on habit rather than what best suits current soil and climate conditions, reducing yield and soil health over time. Build a tool that recommends better crop choices and rotations.

Omni_AgriTech_13

SOFTWARE

Precision Guidance to Reduce Pesticide Overuse

Excess pesticide and water use raises costs and harms the environment, often from lack of precise application guidance. Design an app that helps farmers apply inputs more precisely.

Omni_AgriTech_14

SOFTWARE

Connecting Surplus Food to Those in Need

Usable surplus food from farms, restaurants, and events is often wasted instead of reaching people who need it. Build a platform that efficiently connects surplus food with food banks and shelters.

Omni_AgriTech_15

SOFTWARE

Monitoring to Prevent Bee Colony Collapse

Beekeepers often discover colony collapse only after it happens, with no early warning system. Create an app that helps beekeepers detect problems in hive health early through guided inspection logging and alerts.

Omni_AgriTech_16

SOFTWARE

Identifying Safe, Productive Fishing Zones

Fisherfolk often rely on guesswork, risking both safety and sustainability of fish stocks. Build a tool that helps identify productive and safe fishing zones using available data.

Omni_AgriTech_17

SOFTWARE

Community Early Warning for Pest Swarms

Locust and pest swarm outbreaks can devastate large farming areas if not reported and acted on quickly. Design a community-driven early warning system for such outbreaks.

Omni_AgriTech_18

SOFTWARE

Aggregating Small-Farmer Produce for Better Pricing

Individual smallholder farmers have little bargaining power when selling small quantities. Create a platform that helps farmers aggregate produce to negotiate better prices collectively.

Omni_AgriTech_19

SOFTWARE

Low-Cost Food Adulteration Detection

Small vendors and consumers lack affordable ways to detect common food adulteration. Build an app that helps identify adulterated food products using photo or guided-test analysis.

Omni_AgriTech_20

SOFTWARE

Shared Access to Agricultural Machinery

Expensive farm machinery is often underused by individual smallholder farmers who cannot afford it outright. Design a system that enables efficient sharing of agri-machinery among farmers.

FinTech & Financial Inclusion

Problem Statements 41–60 (IDs Omni_FinTech_1 – Omni_FinTech_20)

Challenges around expanding access to fair, secure financial services — for individuals, gig workers, small businesses, and underserved communities.

Omni_FinTech_1

SOFTWARE

Financial Literacy for First-Time Account Holders

Many first-time bank account holders in rural areas struggle to understand basic financial products, leaving them vulnerable to poor decisions. Build a solution that improves practical financial literacy in an accessible way.

Omni_FinTech_2

SOFTWARE

Alternative Credit Scoring for Informal Workers

Gig and informal-sector workers are often denied credit due to lack of traditional credit history despite steady income. Create an alternative way to assess creditworthiness fairly.

Omni_FinTech_3

SOFTWARE

Real-Time Fraud Detection for Small Merchants

Small merchants using digital payments are increasingly targeted by fraud, often with little protection. Design a real-time solution that helps detect and prevent payment fraud for small businesses.

Omni_FinTech_4

SOFTWARE

Simplified Tax Compliance for Micro-Enterprises

Micro and small enterprises often struggle with the complexity and cost of tax filing and compliance. Build a solution that simplifies this process for them.

Omni_FinTech_5

SOFTWARE

Automated Account Reconciliation for Small Businesses

Small businesses with limited accounting staff often spend excessive time reconciling accounts manually. Create a solution that automates and simplifies this process.

Omni_FinTech_6

SOFTWARE

Secure, Affordable Remittances for Migrant Workers

Migrant workers often lose a significant share of their earnings to high remittance fees and unreliable channels. Design a more secure and affordable way to send money home.

Omni_FinTech_7

SOFTWARE

Predicting Loan Default Risk for Microfinance

Microfinance institutions need better tools to assess default risk without over-relying on rigid, exclusionary criteria. Build a solution that improves risk prediction while remaining fair to borrowers.

Omni_FinTech_8

SOFTWARE

Protecting Small Investors from Mis-Sold Products

First-time investors are often sold complex or unsuitable financial products without understanding the risks. Create a tool that helps them evaluate products before investing.

Omni_FinTech_9

SOFTWARE

Digitizing Community Savings Groups Securely

Traditional chit funds and community savings groups operate largely on trust and paper records, leaving them vulnerable to disputes and fraud. Build a secure digital solution for managing these groups.

Omni_FinTech_10

SOFTWARE

Detecting Shell Companies and Suspicious Transactions

Regulators struggle to identify shell companies and unusual transaction patterns among the sheer volume of financial activity. Design a tool that helps flag suspicious patterns for review.

Omni_FinTech_11

SOFTWARE

Basic Insurance Access for Unbanked Populations

Unbanked populations often have no access to even basic insurance products that could protect them from financial shocks. Build a solution that extends simple insurance access to this population.

Omni_FinTech_12

SOFTWARE

Transparent Tracking of Government Benefit Disbursement

Beneficiaries of government subsidies and welfare schemes often cannot easily verify whether they received their full entitlement. Create a transparent tracking solution for benefit disbursement.

Omni_FinTech_13

SOFTWARE

Simplifying GST Reconciliation for Small Traders

Small traders often struggle with matching invoices for GST compliance, leading to errors and lost input credit. Build a solution that simplifies this reconciliation process.

Omni_FinTech_14

SOFTWARE

Flexible Equipment Leasing for Small Businesses

Small businesses and farmers often cannot afford to buy equipment outright but have few good leasing options. Design a platform that makes flexible equipment leasing more accessible.

Omni_FinTech_15

SOFTWARE

Trustworthy Peer-to-Peer Lending for Underserved Borrowers

Underserved borrowers often lack access to fair lending options, while individual lenders lack tools to assess risk. Build a peer-to-peer lending platform with better trust and risk transparency.

Omni_FinTech_16

SOFTWARE

Reducing Cheque and Paper Transaction Fraud

Semi-urban banking still relies heavily on cheques and paper transactions, which remain vulnerable to fraud. Create a solution that reduces this fraud risk.

Omni_FinTech_17

SOFTWARE

Detecting Ponzi and Pyramid Scheme Patterns

Ponzi and pyramid investment schemes continue to spread online, often targeting inexperienced investors. Build a tool that helps identify and flag such schemes early.

Omni_FinTech_18

SOFTWARE

Safe Digital Banking Guidance for Elderly Users

Elderly citizens are increasingly targeted by digital banking scams as they adopt online banking. Design a solution that helps them bank safely and avoid common scams.

Omni_FinTech_19

SOFTWARE

Household Budgeting Support for Low-Income Families

Low-income families often lack simple tools to plan and track household budgets against irregular income. Build a solution tailored to their specific needs.

Omni_FinTech_20

SOFTWARE

Cost Transparency in Cross-Border Payments

Small exporters and importers often face hidden costs and unpredictable fees in cross-border payments. Create a solution that improves transparency in these transactions.

EdTech & Skill Development

Problem Statements 61–80 (IDs Omni_EdTech_1 – Omni_EdTech_20)

Problems around access, quality, and personalization of education and skilling — for students, teachers, and lifelong learners across different resource settings.

Omni_EdTech_1

SOFTWARE

Personalized Learning for Low-Bandwidth Schools

Students in rural schools with limited internet access often cannot benefit from modern personalized learning platforms designed for high-bandwidth environments. Build a solution that works well under these constraints.

Omni_EdTech_2

SOFTWARE

Early Identification of At-Risk Dropout Students

Students who eventually drop out often show warning signs that go unnoticed until it is too late to intervene. Design a solution that helps identify at-risk students earlier.

Omni_EdTech_3

SOFTWARE

Objective Evaluation of Practical Vocational Skills

Vocational training programs often rely on subjective, inconsistent evaluation of hands-on skills. Build an app that provides a more objective and scalable way to assess practical competence through video submission and structured review.

Omni_EdTech_4

SOFTWARE

Regional Language Access to Quality Digital Content

High-quality digital learning content is disproportionately available in English, leaving many students underserved. Create a solution that bridges this regional language gap.

Omni_EdTech_5

SOFTWARE

Mapping Skill Gaps to Industry Needs

Students often graduate with skills misaligned to what employers actually need. Build a tool that helps map and close this gap.

Omni_EdTech_6

SOFTWARE

Accessible Learning for Visually and Hearing Impaired Students

Students with visual or hearing impairments often lack access to learning content designed for their needs. Design an inclusive solution that improves their access to quality education.

Omni_EdTech_7

SOFTWARE

Fast Lesson Planning Support for Teachers

Teachers in under-resourced schools often lack time and materials to prepare quality lessons. Build a tool that helps them create effective lesson plans quickly.

Omni_EdTech_8

SOFTWARE

Detecting Foundational Learning Gaps Early

Gaps in foundational literacy and numeracy in early primary grades often go undetected and compound over time. Create a solution that helps identify and address these gaps early.

Omni_EdTech_9

SOFTWARE

Career Counselling Access in Smaller Towns

Students in tier-2 and tier-3 towns often lack access to quality career counselling available in bigger cities. Design a solution that makes this guidance more accessible.

Omni_EdTech_10

SOFTWARE

Peer-to-Peer Skill Exchange Among Students

Students often have valuable skills to teach each other but lack a structured way to do so. Build a platform that facilitates peer-to-peer skill exchange and mentorship.

Omni_EdTech_11

SOFTWARE

Gamified STEM Learning for Government Schools

STEM subjects are often taught in ways that fail to engage middle-school students in government schools. Create a gamified approach that makes STEM learning more engaging.

Omni_EdTech_12

SOFTWARE

Reducing Exam-Related Anxiety Through Better Preparation

Exam anxiety among students is often worsened by poor visibility into their own preparation progress. Build a solution that helps students track and manage exam preparation more calmly and effectively.

Omni_EdTech_13

SOFTWARE

Verifying Authenticity of Academic Credentials

Fake degrees and certificates undermine trust in academic credentials for employers and institutions alike. Design a solution that makes credential verification fast and reliable.

Omni_EdTech_14

SOFTWARE

Continuing Education for Time-Constrained Working Adults

Working adults who want to upskill often struggle to fit structured learning into limited free time. Build a solution suited to their constraints.

Omni_EdTech_15

SOFTWARE

Connecting Rural Students with Remote Tutors

Rural students often lack access to subject-matter tutors that urban students take for granted. Create a platform that connects them with volunteer or affordable tutors remotely.

Omni_EdTech_16

SOFTWARE

Adaptive Assessment Based on Real-Time Performance

Standard assessments often fail to reflect a student's true understanding because difficulty doesn't adjust to performance. Design an adaptive assessment tool that responds to student performance in real time.

Omni_EdTech_17

SOFTWARE

Supportive, Non-Intrusive Learning Tracking for Parents

Parents often want to support their child's learning but lack visibility without being overly intrusive. Build a solution that strikes this balance well.

Omni_EdTech_18

SOFTWARE

Optimizing Library Resource Access in Schools

Resource-constrained schools often underutilize the limited library resources they do have due to poor organization and access. Create a solution that improves this access and utilization.

Omni_EdTech_19

SOFTWARE

Hands-On Coding Education Without High-End Devices

Many students want to learn practical coding and technical skills but lack access to high-end devices. Build a solution that enables meaningful hands-on learning despite this constraint.

Omni_EdTech_20

SOFTWARE

Identifying Gifted Students in Under-Resourced Schools

Gifted students in under-resourced schools often go unnoticed and unsupported due to lack of systematic identification. Design a solution that helps identify and nurture their potential.

Smart Cities & Governance

Problem Statements 81–100 (IDs Omni_SmartCity_1 – Omni_SmartCity_20)

Challenges in making urban infrastructure, civic services, and local governance more efficient, transparent, and responsive to citizens.

Omni_SmartCity_1

SOFTWARE

Real-Time Traffic Signal Optimization

Fixed-timing traffic signals often worsen congestion by ignoring actual real-time traffic conditions. Build a software solution that recommends and adjusts signal timing based on live traffic data.

Omni_SmartCity_2

SOFTWARE

Citizen Reporting and Tracking of Civic Issues

Civic issues like potholes, garbage, and broken streetlights are often reported but never tracked to resolution. Design a platform that closes this loop transparently for citizens.

Omni_SmartCity_3

SOFTWARE

Efficient Urban Waste Collection Routing

Waste collection routes in many cities are planned inefficiently, wasting fuel and missing areas. Create a solution that optimizes collection routes based on real needs.

Omni_SmartCity_4

SOFTWARE

Smart Parking Management in Congested Areas

Drivers in congested city areas waste significant time searching for parking, worsening traffic. Build an app that helps manage and guide parking availability in real time.

Omni_SmartCity_5

SOFTWARE

Faster, Transparent Building Permit Approvals

Building and property permit approvals are often slow and opaque, encouraging informal workarounds. Design a solution that improves transparency and speed in this process.

Omni_SmartCity_6

SOFTWARE

Neighbourhood-Level Air Quality Monitoring and Alerts

Air quality data is often only available at a city-wide level, missing important neighbourhood-level variation. Build an app that aggregates crowdsourced and open air-quality data to provide localized monitoring and public alerts.

Omni_SmartCity_7

SOFTWARE

Detecting Illegal Construction and Land Encroachment

Illegal construction and land encroachment often go unnoticed until significant damage is done. Create a solution using available imagery or data to detect these issues earlier.

Omni_SmartCity_8

SOFTWARE

Optimizing Streetlight Energy Use by Footfall

Streetlights often run at full brightness regardless of actual pedestrian or vehicle footfall, wasting energy. Design a software platform that recommends lighting schedules optimized to real usage pattern data.

Omni_SmartCity_9

SOFTWARE

Participatory Budgeting for Local Community Projects

Citizens rarely have a meaningful say in how local infrastructure budgets are allocated. Build a platform that enables genuine participatory budgeting at the community level.

Omni_SmartCity_10

SOFTWARE

Faster Detection of Urban Water Pipeline Leakage

Water pipeline leaks in urban distribution networks often go undetected for long periods, wasting significant water. Create an app/platform that analyzes utility consumption data to detect leaks faster.

Omni_SmartCity_11

SOFTWARE

Crowd Density Monitoring at Public Events

Large public events and transit hubs can become dangerous when crowd density is not monitored and managed well. Build an app that helps manage crowd safety in real time using camera-feed or crowd-sourced input.

Omni_SmartCity_12

SOFTWARE

Simplifying Access to Welfare Scheme Information

Citizens often miss out on government welfare schemes they are eligible for due to confusing or scattered information. Design a solution that simplifies eligibility checks and access.

Omni_SmartCity_13

SOFTWARE

Tracking Waste Segregation Compliance

Municipal solid waste segregation rules are often poorly followed due to lack of tracking and accountability. Build a solution that improves compliance tracking.

Omni_SmartCity_14

SOFTWARE

Risk-Based Prioritization of Infrastructure Repair

Cities often repair infrastructure reactively rather than based on actual risk and usage data. Create a solution that helps prioritize repairs more effectively.

Omni_SmartCity_15

SOFTWARE

Accessible Grievance Redressal for Non-Smartphone Users

Citizens without smartphones are often excluded from digital civic grievance systems. Design a solution that ensures accessible grievance redressal for everyone.

Omni_SmartCity_16

SOFTWARE

Coordinating Disaster-Relief Resources Across Departments

During emergencies, city departments often struggle to coordinate resources efficiently due to siloed systems. Build a solution that improves coordination during such events.

Omni_SmartCity_17

SOFTWARE

Monitoring Noise Pollution in Dense Urban Zones

Noise pollution monitoring is often sparse in dense urban areas despite its impact on health. Create an app that improves monitoring and reporting of noise pollution using smartphone microphones and crowdsourced data.

Omni_SmartCity_18

SOFTWARE

Citizen-Friendly Access to Land Records

Accessing accurate land records and property documents is often a confusing, slow process for ordinary citizens. Design a solution that simplifies and digitizes this access.

Omni_SmartCity_19

SOFTWARE

Optimizing Public Transport Frequency by Ridership

Public transport schedules often don't reflect actual ridership patterns, leading to overcrowding or empty buses. Build a solution that optimizes frequency based on real demand.

Omni_SmartCity_20

SOFTWARE

Transparency in Local Government Procurement

Local government procurement and spending processes often lack the transparency needed to prevent misuse. Create a solution that increases visibility into this process for citizens.

CleanTech & Environment

Problem Statements 101–120 (IDs Omni_CleanTech_1 – Omni_CleanTech_20)

Challenges in sustainability, pollution control, resource conservation, and environmental monitoring — for households, communities, and small industries.

Omni_CleanTech_1

SOFTWARE

Alternatives to Agricultural Stubble Burning

Farmers often burn crop residue because they lack affordable alternatives, contributing significantly to air pollution. Build a platform that connects farmers with buyers, processors, or logistics for turning stubble into a usable product instead of burning it.

Omni_CleanTech_2

SOFTWARE

Household-Level Plastic Waste Tracking

Households often have little visibility into how much plastic waste they generate or how to reduce it. Design a solution that helps track and reduce this waste.

Omni_CleanTech_3

SOFTWARE

Fair Matching of Recyclables with Waste-Pickers

Informal waste-picker networks are often unfairly compensated despite playing a key role in recycling. Build a platform that matches recyclable waste generators with waste-pickers more fairly.

Omni_CleanTech_4

SOFTWARE

Monitoring Industrial Effluent Discharge

Industrial effluent discharge into water bodies often goes unmonitored until significant damage occurs. Create an app/platform that improves real-time monitoring and reporting of this discharge.

Omni_CleanTech_5

SOFTWARE

Region-Specific Household Water Purification

Water contamination varies significantly by region, but purification solutions are often generic. Design an app that helps households identify local water contaminants and recommends purification methods suited to them.

Omni_CleanTech_6

SOFTWARE

Optimizing Rooftop Solar Panel Performance

Residential rooftop solar users often lack tools to optimize placement and maintenance for maximum output. Build a solution that helps them get the most from their installation.

Omni_CleanTech_7

SOFTWARE

Community Rainwater Harvesting Planning

Communities often lack the planning tools needed to implement effective rainwater harvesting at scale. Create a solution that supports better community-level planning and monitoring.

Omni_CleanTech_8

SOFTWARE

Marketplaces for Electronic Waste Repair and Reuse

Usable electronics are often discarded as e-waste when repair or refurbishment would extend their life. Design a solution that connects people to repair and reuse options.

Omni_CleanTech_9

SOFTWARE

Low-Cost Detection of Illegal Dumping or Deforestation

Illegal dumping and deforestation often go undetected until significant damage has occurred. Build an app/platform that uses satellite or crowdsourced imagery to detect these activities earlier.

Omni_CleanTech_10

SOFTWARE

Carbon Footprint Tracking for Small Businesses

Small and medium enterprises often lack simple tools to measure and reduce their carbon footprint. Create a solution tailored to their scale and resources.

Omni_CleanTech_11

SOFTWARE

Connecting Household Compost to Urban Farms

Organic household waste is often thrown away instead of being composted and used productively. Design a platform that connects composted waste to urban farming initiatives.

Omni_CleanTech_12

SOFTWARE

Reducing Single-Use Packaging in Deliveries

Food delivery and e-commerce generate significant single-use packaging waste. Build a solution that helps reduce this waste without hurting convenience.

Omni_CleanTech_13

SOFTWARE

Community Monitoring of Groundwater Depletion

Groundwater depletion often goes unnoticed at the community level until wells begin running dry. Create an app that helps communities log, monitor, and respond to this risk.

Omni_CleanTech_14

SOFTWARE

Energy Optimization for Small Manufacturing Units

Small manufacturing units often have limited visibility into where they can cut energy use and cost. Design an app that helps them optimize energy consumption.

Omni_CleanTech_15

SOFTWARE

Tracking Urban Tree Plantation Survival

Urban tree plantation drives often fail to track whether planted trees actually survive long-term. Build a solution that improves survival tracking and accountability.

Omni_CleanTech_16

SOFTWARE

Safe Recycling of EV and Electronics Batteries

Used batteries from EVs and electronics pose environmental hazards if not recycled properly, and safe recycling infrastructure is limited. Create an app/platform that connects users with safe battery recycling and drop-off options.

Omni_CleanTech_17

SOFTWARE

Early Detection of Forest Fire Risk

Forest fires often spread significantly before being detected and reported. Design an app/platform that uses satellite and weather data for earlier detection and alerting of fire risk.

Omni_CleanTech_18

SOFTWARE

Reducing Food Waste Through Better Demand Forecasting

Restaurants and hostels often over-prepare food, leading to significant avoidable waste. Build a solution that improves demand forecasting to reduce this waste.

Omni_CleanTech_19

SOFTWARE

Community-Operated Water Quality Monitoring

River and lake water quality monitoring is often too centralized and infrequent to catch problems early. Create an app that enables community-operated water quality monitoring and reporting using simple test kits.

Omni_CleanTech_20

SOFTWARE

Encouraging Clean Cooking Fuel Adoption

Many rural households still rely on polluting cooking fuels despite availability of cleaner alternatives. Design a solution that promotes and tracks adoption of clean cooking fuel.

Transportation & Logistics

Problem Statements 121–140 (IDs Omni_Transport_1 – Omni_Transport_20)

Problems in moving people and goods more safely, efficiently, and sustainably — covering urban mobility, freight, and last-mile delivery.

Omni_Transport_1

SOFTWARE

Optimizing Last-Mile Delivery Routes

Last-mile delivery in dense urban areas is often inefficient, increasing cost, time, and emissions. Build a solution that optimizes these delivery routes.

Omni_Transport_2

SOFTWARE

Predicting Public Transport Vehicle Breakdowns

Unexpected breakdowns in public transport fleets disrupt service and increase costs. Design a software solution that analyzes maintenance and usage data to predict and prevent these breakdowns.

Omni_Transport_3

SOFTWARE

Shared Transport for Poor Last-Mile Connectivity

Areas with poor last-mile transit connectivity often leave commuters with few affordable options. Create a solution that enables shared or pooled transport in these areas.

Omni_Transport_4

SOFTWARE

Reducing Empty-Return Trips in Freight

Trucks frequently return empty after deliveries, wasting fuel and capacity. Build a solution that helps reduce these empty-return trips in freight logistics.

Omni_Transport_5

SOFTWARE

Real-Time Tracking to Prevent Cargo Theft

Goods in transit are vulnerable to theft, especially over long routes with limited monitoring. Design an app that improves real-time tracking and theft alerting for goods in transit.

Omni_Transport_6

SOFTWARE

Accessible Public Transit for Persons with Disabilities

Persons with disabilities often face significant barriers using public transit systems not designed with their needs in mind. Build an app that improves accessibility information and navigation support for public transit.

Omni_Transport_7

SOFTWARE

Optimizing School Bus Routes for Safety

School bus routes are often planned without adequate consideration for safety and efficiency. Create a solution that improves route planning for school transport.

Omni_Transport_8

SOFTWARE

Predictive Maintenance for Rail Infrastructure

Railway and metro infrastructure components often fail unexpectedly due to lack of predictive maintenance. Design a software solution that analyzes inspection and usage data to help predict maintenance needs before failure.

Omni_Transport_9

SOFTWARE

Reducing Fatigue-Related Trucking Accidents

Driver fatigue is a major contributor to accidents in long-haul trucking. Build an app that monitors driving patterns and alerts drivers and fleet operators to reduce fatigue-related accidents.

Omni_Transport_10

SOFTWARE

Warehouse Inventory Optimization for Small Logistics Providers

Small and medium logistics providers often lack sophisticated tools for inventory optimization available to larger players. Create a solution tailored to their needs.

Omni_Transport_11

SOFTWARE

Matching Idle Cargo Capacity with Shippers

Trucks and containers often travel with unused capacity while shippers struggle to find affordable transport. Design a platform that matches idle capacity with shipping demand.

Omni_Transport_12

SOFTWARE

Improving Safety at Accident-Prone Junctions

Certain road junctions see disproportionately high accident rates but lack adequate low-cost safety measures. Build an app/platform that uses crowdsourced and traffic data to flag risk and improve safety at these junctions.

Omni_Transport_13

SOFTWARE

Reducing Congestion at Toll Plazas

Toll plazas and check-posts often cause significant congestion and delay. Create a software solution that reduces wait times at these points.

Omni_Transport_14

SOFTWARE

Optimal Placement of EV Charging Stations

Electric vehicle adoption is limited partly by poorly planned charging infrastructure. Design a solution that optimizes EV charging station placement and usage.

Omni_Transport_15

SOFTWARE

Shared Logistics Connecting Rural Producers to Markets

Rural producers often struggle to reach urban markets affordably due to fragmented logistics. Build a solution that enables shared logistics for this connection.

Omni_Transport_16

SOFTWARE

Real-Time Crowding Information for Commuters

Commuters often board overcrowded buses or trains without knowing crowding levels beforehand. Create a solution that provides real-time crowding information.

Omni_Transport_17

SOFTWARE

Preventing Cold-Chain Breaks in Perishable Transport

Perishable goods transport frequently suffers cold-chain breaks that go unnoticed until spoilage occurs. Design an app/platform that integrates with existing temperature loggers to detect and alert on these breaks.

Omni_Transport_18

SOFTWARE

Safer Navigation for Delivery Riders in Bad Weather

Two-wheeler delivery riders face significant risk navigating in poor weather conditions. Build a solution that helps them navigate more safely and efficiently.

Omni_Transport_19

SOFTWARE

Multi-Modal Journey Planning for Indian Cities

Commuters using multiple transport modes (bus, metro, auto) often lack integrated journey planning tools suited to Indian cities. Create a solution that optimizes such multi-modal planning.

Omni_Transport_20

SOFTWARE

Reducing Vehicle Idling at Traffic Bottlenecks

Vehicles idling at traffic bottlenecks contribute significantly to emissions and fuel waste. Design a software solution that helps reduce this idling.

Cybersecurity, Blockchain & Digital Trust

Problem Statements 141–160 (IDs Omni_CyberTech_1 – Omni_CyberTech_20)

Challenges in protecting people, businesses, and institutions online — from fraud and phishing to verifiable identity, records, and trustworthy digital systems.

Omni_CyberTech_1

SOFTWARE

Regional-Language Phishing Detection

Phishing attacks increasingly target non-tech-savvy users in regional languages, who are underserved by existing detection tools. Build a solution that helps detect and warn against such attacks.

Omni_CyberTech_2

SOFTWARE

Affordable Cybersecurity Assessment for Small Businesses

Small businesses often cannot afford proper cybersecurity assessments, leaving them vulnerable to attacks. Design a solution that makes this assessment accessible and affordable.

Omni_CyberTech_3

SOFTWARE

Verifiable Digital Identity for Informal Workers

Undocumented or informal workers often lack any verifiable digital identity, excluding them from services. Create a secure solution that addresses this gap.

Omni_CyberTech_4

SOFTWARE

Detecting Deepfake and Manipulated Media

Deepfakes and manipulated media are increasingly used to spread misinformation on social platforms. Build a solution that helps detect such manipulated content.

Omni_CyberTech_5

SOFTWARE

Blockchain Verification for High-Value Supply Chains

High-value goods like medicines and premium produce are vulnerable to counterfeiting in the supply chain. Design a blockchain-based solution that verifies authenticity through the chain.

Omni_CyberTech_6

SOFTWARE

Proactive Protection of Children from Online Harm

Children face growing risk from online predators and harmful content, often without adequate protective tools. Build a solution that proactively helps protect them.

Omni_CyberTech_7

SOFTWARE

Secure, Consent-Based Medical Record Sharing

Hospitals often cannot securely share patient medical records with each other, hurting continuity of care. Create a solution that enables secure, consent-based sharing.

Omni_CyberTech_8

SOFTWARE

Detecting SIM-Swap and Account-Takeover Fraud

SIM-swap and account-takeover fraud are a growing threat to digital banking users. Design a solution that helps detect and mitigate this fraud.

Omni_CyberTech_9

SOFTWARE

Tamper-Proof Digital Voting for Local Decisions

Local community decisions often lack a trustworthy, tamper-proof way to conduct digital polling or voting. Build a secure solution for this purpose.

Omni_CyberTech_10

SOFTWARE

Identifying Fake Job Postings and Recruitment Scams

Job seekers are frequently targeted by fake job postings and recruitment scams. Create a solution that helps identify and flag such scams.

Omni_CyberTech_11

SOFTWARE

Privacy-Preserving Data Sharing Across Government Departments

Government departments often struggle to share data usefully while preserving citizen privacy. Design a solution that enables this sharing responsibly.

Omni_CyberTech_12

SOFTWARE

Detecting Bot-Driven Misinformation Campaigns

Bot-driven misinformation campaigns can spread rapidly during public events or elections. Build a solution that helps detect such coordinated campaigns.

Omni_CyberTech_13

SOFTWARE

Securing IoT Devices in Smart Homes

IoT devices in smart homes often ship with common, exploitable vulnerabilities. Create an app that helps everyday users discover, monitor, and secure their IoT devices.

Omni_CyberTech_14

SOFTWARE

Blockchain-Verified Academic Certificates

Verifying academic and professional certificates remains slow and prone to fraud. Design a blockchain-based solution that makes verification fast and reliable.

Omni_CyberTech_15

SOFTWARE

Anonymous Reporting of Harassment or Corruption

Workplace harassment and corruption often go unreported due to fear of retaliation. Build a secure, anonymous reporting solution.

Omni_CyberTech_16

SOFTWARE

Early Ransomware Detection for Small Businesses

Small business networks are increasingly targeted by ransomware but often lack early detection capability. Create a solution that helps detect ransomware attacks early.

Omni_CyberTech_17

SOFTWARE

Tamper-Resistant Digital Land Records

Land records are vulnerable to tampering and disputes when managed through outdated systems. Design a secure digital land record management solution.

Omni_CyberTech_18

SOFTWARE

Helping Elderly Users Avoid Tech-Support Scams

Elderly users are frequently targeted by tech-support scams that exploit their limited digital experience. Build a solution that helps them identify and avoid such scams.

Omni_CyberTech_19

SOFTWARE

Transparent, Verifiable Charitable Donation Tracking

Donors often cannot verify that their charitable contributions actually reach intended beneficiaries. Create a transparent tracking solution for donations.

Omni_CyberTech_20

SOFTWARE

Accessible Password-Less Authentication

Low-literacy users often struggle with traditional password-based authentication systems. Design an accessible, secure alternative authentication method.

Disaster Management & Public Safety

Problem Statements 161–180 (IDs Omni_DisasterMgmt_1 – Omni_DisasterMgmt_20)

Challenges in preparing for, responding to, and recovering from natural and man-made disasters — with a focus on early warning, coordination, and vulnerable populations.

Omni_DisasterMgmt_1

SOFTWARE

Early Flood Warning for Vulnerable Areas

Low-lying urban and rural areas often receive flood warnings too late to act effectively. Build an app that provides earlier, more actionable flood warnings using weather and hydrological data.

Omni_DisasterMgmt_2

SOFTWARE

Coordinating Volunteers and Resources in Disaster Response

Disaster response efforts are often hampered by poor coordination of volunteers and resources. Design a solution that improves this coordination.

Omni_DisasterMgmt_3

SOFTWARE

Real-Time Missing-Person Search Coordination

Search for missing persons after disasters is often disorganized across multiple agencies and volunteers. Create a solution that coordinates this search more effectively.

Omni_DisasterMgmt_4

SOFTWARE

Structural Health Monitoring in Earthquake Zones

Bridges and buildings in earthquake-prone zones often lack continuous structural health monitoring. Build an app/platform that helps schedule, log, and report structural safety inspections.

Omni_DisasterMgmt_5

SOFTWARE

Low-Cost Landslide Early Warning

Hilly terrain prone to landslides often lacks affordable early warning systems. Design an app that uses weather and terrain data to provide landslide early warning.

Omni_DisasterMgmt_6

SOFTWARE

Localized Evacuation Planning for Communities

Communities often lack practiced, localized evacuation plans suited to their specific risks. Create a solution that helps communities build and practice such plans.

Omni_DisasterMgmt_7

SOFTWARE

Crowd-Sourced Hazard Reporting During Emergencies

During emergencies, hazards like fallen trees or blocked roads often go unreported to authorities in time. Build a solution that enables crowd-sourced hazard reporting.

Omni_DisasterMgmt_8

SOFTWARE

Optimizing Emergency Vehicle Routing

Emergency vehicles often face delays navigating heavy traffic during disasters. Design a solution that optimizes their routing in real time.

Omni_DisasterMgmt_9

SOFTWARE

Ensuring Continuity of Essential Medicine Supply

Disasters often disrupt the supply of essential medicines when they are needed most. Create a solution that helps maintain continuity of this supply.

Omni_DisasterMgmt_10

SOFTWARE

Drone-Based Post-Disaster Damage Assessment

Post-disaster damage assessment is often slow when done manually, delaying relief efforts. Build an app/platform that analyzes satellite or crowdsourced imagery to speed up post-disaster damage assessment.

Omni_DisasterMgmt_11

SOFTWARE

Connecting Disaster-Affected Families with Shelter and Aid

Families affected by disasters often struggle to find and access available temporary shelter and aid. Design a platform that connects them efficiently.

Omni_DisasterMgmt_12

SOFTWARE

Predicting Wildfire Spread for Early Alerting

Wildfires can spread rapidly in vulnerable regions with insufficient early alerting. Create a solution that predicts spread and alerts at-risk populations.

Omni_DisasterMgmt_13

SOFTWARE

Reliable Distress Alerts for Women's Safety

Existing safety apps for women often suffer from false alarms or unreliable alerting, reducing trust. Build an app that improves the reliability of distress alerts.

Omni_DisasterMgmt_14

SOFTWARE

Privacy-Conscious Child Safety Tracking in Crowds

Parents worry about losing track of children in crowded public events but want privacy-respecting solutions. Design an app that balances safety and privacy.

Omni_DisasterMgmt_15

SOFTWARE

Tracking Community Disaster Preparedness Training

Community disaster preparedness drills are often conducted inconsistently with no tracking of participation or effectiveness. Create a solution that improves this tracking.

Omni_DisasterMgmt_16

SOFTWARE

Real-Time Detection of Gas Leaks Near Homes

Gas leaks and industrial hazards near residential areas can go undetected until serious harm occurs. Build an app/platform that integrates with existing gas detectors to alert on such hazards in real time.

Omni_DisasterMgmt_17

SOFTWARE

Reducing Ambulance Response Time in Cities

Ambulance services in traffic-heavy cities often face significant delays reaching patients. Design a solution that helps reduce this response time.

Omni_DisasterMgmt_18

SOFTWARE

Verifying Authenticity of Emergency Donation Appeals

Fraudulent donation appeals often spread rapidly after disasters, diverting funds from genuine relief. Create a solution that helps verify the authenticity of such appeals.

Omni_DisasterMgmt_19

SOFTWARE

Coordinated Multi-Agency Emergency Communication

Multiple agencies responding to large-scale emergencies often struggle to communicate effectively with each other. Build a solution that improves this coordination.

Omni_DisasterMgmt_20

SOFTWARE

Predicting and Alerting for Heatwave Risk

Vulnerable populations like the elderly and outdoor workers are often caught unprepared by heatwaves. Design a solution that predicts risk and alerts them in time.

Tourism, Heritage & Emerging Tech

Problem Statements 181–200 (IDs Omni_Tourism_1 – Omni_Tourism_20)

Problems in making travel and cultural experiences safer, more sustainable, and more enriching — alongside open-ended challenges in emerging technology areas.

Omni_Tourism_1

SOFTWARE

AI-Guided Multilingual Heritage Tours

Heritage sites often lack engaging, personalized guidance available in visitors' own regional languages. Build a solution that provides AI-guided tours in multiple languages.

Omni_Tourism_2

SOFTWARE

Smart Scheduling to Reduce Tourist Overcrowding

Popular tourist destinations frequently suffer from overcrowding that hurts both visitor experience and site preservation. Design a solution that helps manage visitor flow through smarter scheduling.

Omni_Tourism_3

SOFTWARE

Digitizing Endangered Local Art and Traditions

Local art, crafts, and oral traditions are at risk of being lost as fewer practitioners remain. Create a solution that helps preserve and digitize these cultural assets.

Omni_Tourism_4

SOFTWARE

Connecting Tourists with Verified Local Homestays

Tourists often struggle to find trustworthy, verified local homestays and guides outside major platforms. Build a solution that connects them directly and reliably.

Omni_Tourism_5

SOFTWARE

Real-Time Safety Assistance for Solo Travelers

Solo and women travelers often lack reliable, real-time safety assistance while traveling. Design an app that provides this support.

Omni_Tourism_6

SOFTWARE

Promoting Lesser-Known Tourist Destinations

Popular destinations face overcrowding while many equally worthwhile lesser-known places remain overlooked. Create a solution that helps promote these alternatives.

Omni_Tourism_7

SOFTWARE

Accessible Navigation for Travelers with Disabilities

Travelers with disabilities often lack adequate accessibility information and navigation support at tourist destinations. Build a solution that addresses this gap.

Omni_Tourism_8

SOFTWARE

Discovering Authentic Local Experiences

Tourists often only encounter typical tourist-trap experiences instead of authentic local food and culture. Design a solution that helps them discover genuine local experiences.

Omni_Tourism_9

SOFTWARE

AR Reconstruction of Historical Monuments

Damaged or partially ruined historical monuments are hard for visitors to fully appreciate in their original form. Create an AR-based solution that reconstructs and enhances visitor engagement.

Omni_Tourism_10

SOFTWARE

Reducing Tourism's Waste Footprint at Sensitive Sites

Ecologically sensitive tourist sites often suffer from plastic and waste pollution generated by visitors. Build an app that helps reduce this footprint.

Omni_Tourism_11

SOFTWARE

Verifying Authenticity and Fair Pricing of Handicrafts

Tourists often cannot verify whether handicrafts are authentic or fairly priced, hurting genuine artisans. Design a solution that improves this transparency.

Omni_Tourism_12

SOFTWARE

Wildlife Tourism That Minimizes Animal Disturbance

Wildlife tourism can unintentionally disturb animals when visitor behavior and proximity aren't well managed. Create an app that uses visitor behavior tracking and guidance to minimize this disturbance.

Omni_Tourism_13

SOFTWARE

Real-Time Translation Assistance for Foreign Tourists

Foreign tourists in non-English-speaking regions often face significant language barriers. Build a solution that provides real-time translation assistance.

Omni_Tourism_14

SOFTWARE

Community-Based Tourism Benefiting Local Economies

Tourism revenue often bypasses local communities despite them being central to the experience. Design a solution that ensures community-based tourism benefits reach locals directly.

Omni_Tourism_15

SOFTWARE

Immersive Virtual Tourism for Remote Access

People unable to travel physically often have no way to meaningfully experience distant destinations. Create an immersive virtual tourism solution for them.

Omni_Tourism_16

SOFTWARE

Tracking Cleanliness and Hygiene at Tourist Spots

Cleanliness and hygiene standards at tourist spots are often inconsistent and poorly monitored. Build a solution that tracks and helps improve these standards.

Omni_Tourism_17

SOFTWARE

Emergency Medical Assistance for Remote-Area Tourists

Tourists in remote areas often face major delays accessing emergency medical assistance. Design a solution that improves coordination of such assistance.

Omni_Tourism_18

SOFTWARE

Gamified Cultural Heritage Learning for Young Travelers

Young travelers often disengage from cultural heritage content presented in traditional, non-interactive formats. Create a gamified solution that improves engagement.

Omni_Tourism_19

SOFTWARE

Optimizing Tourist Transport Scheduling in Peak Season

Tourist transport like buses and taxis is often poorly scheduled during peak season, causing delays and overcrowding. Build a solution that optimizes this scheduling.

Omni_Tourism_20

SOFTWARE

Demand Forecasting for Small Tourism Businesses

Small tourism businesses often over- or under-prepare inventory and staffing due to poor demand forecasting. Design an AI-driven solution that improves this forecasting.
